#### **Section 3: INSTRUCTIONS TO APPLICANTS**

#### 1. BACKGROUND

Accumulation of plastic objects and particles (e.g. plastic bottles, bags and micro beads) in the environment adversely affects habitat, wildlife, and humans. Uncollected plastic waste results in littering, illegal dumping and burning, which in turn can cause serious health and environmental impacts. Plastics that travel through sewage and storm water systems end up in water bodies. In 2016, plastics represented 12 percent of solid waste worldwide. Plastics can take hundreds to thousands of years to decompose, which presents major environmental and human health problems. Most of the plastic waste goes to landfill and garbage heaps after they are used, and some are recycled. At the local level, there is scope for some types of plastic (e.g., high-density polyethylene and polyethylene,terephthalate) to be recycled into a variety of items, including plastic lumber, furniture, asphalt for roads, liquid RDF and household goods.

Therefore, Plastic waste has to be disposed as per Plastic Waste Management Rules—2016 using innovative Environment Friendly manner via recycling/ co-processing at cement manufacturing units in the form of RDF / waste to oil/ road construction as per Indian Road Congress guidelines.
